Analysis of the future prospects of China s microgrid

Overview

Microgrid future trends have three directions: 1) the market continues to develop with more DERs applications; 2) commercial and industrial microgrids deployment grow rapidly; 3) Asia becomes the microgrid main market. At a new energy vehicle industrial park in the city of Xuzhou, east China's Jiangsu Province, a large digital screen flashes real-time data on solar power generation and carbon dioxide reduction. Sprawling across the park's rooftops are 52,000 square meters of photovoltaic panels, supported by an. In Xuzhou, Jiangsu Province, a new energy vehicle industrial park features a 52,000-square-meter array of photovoltaic panels integrated with an energy storage system, forming a self-sufficient microgrid. This system generates nearly 7 million kilowatt-hours of electricity annually, fully powering. • It is reported about 100 microgrid-related projects have been built up to 2019*. No accurate microgrids demonstration projects were publicly reported in 2020 and 2021, however, at least 20 newly-built microgrids can be found from different public sources. The market is witnessing a shift towards decentralized.
