

Can solar power be sold to the state

Overview

To successfully charge for selling solar energy to the state, one must understand several key facets involved in the process, including 1. Understanding State Regulations, 2. Not every location or property is suitable for selling electricity back to the grid. Success depends on state policies, utility company rules, system sizing limitations, and property characteristics. Selling power to the grid requires a registered electricity generator's license and qualified power-generating assets such as a natural gas plant, nuclear facility, or utility-grade solar farm. Residential solar panels typically produce more electricity than a home uses during the middle of the day, and that surplus can be. Whether you live in a state with traditional net metering policies or a deregulated market that relies on specific buyback plans, the rules dictating your savings depend entirely on your location and utility provider.
