

China invents new solar power generation

Overview

China has pushed the boundaries of solar technology with its latest innovation: a solar panel powered by a “miracle material. ” This new development could redefine global energy production and deliver higher efficiency at a lower cost. The innovation comes from Longi, one of the world's top solar. China's solar power generation overtook wind for the first time last year as a boom in cheap panels continues to reshape the country's grid and climate trajectory. 17 million gigawatt-hours of electricity from solar power in 2025, up 40% on a year earlier, the National Bureau. An aerial drone photo taken on July 29, 2025 shows photovoltaic panels at the site of a desertification control project integrated with wind and solar power facilities in Horqin Right Wing Middle Banner of Hinggan League, north China's Inner Mongolia Autonomous Region. 2 TW and pushing non-fossil power sources past thermal generation for the first time.
