

Free installation of rooftop solar power

Overview

The federal government does not provide free solar panels, but many states and utilities offer incentives that can reduce the cost of going solar. You can install solar panels on your roof with no upfront cost by signing a lease or PPA or taking out a \$0-down loan. Rooftop solar power, also known as rooftop photovoltaic (PV) systems, refers to solar panels installed on residential or commercial building rooftops to generate electricity. These systems convert sunlight directly into electrical energy through photovoltaic cells, providing clean, renewable power. We use Google Earth imagery to analyze your roof shape and local weather patterns to create a personalized solar plan. Join over 8,000 people who received a free, no obligation quote in the last 30 days. Community solar: Renters, homeowners, businesses, and other customers can tap into solar power. If a rooftop solar installation is feasible on your property, you may be to achieve key benefits like lower project cost, more efficient use of your available land, and even additional protection for your roof.
