

How to Choose a Surge Protection Type for Communication Power Supply Racks

Overview

Learn how to select the right Signal Surge Protector (SPD) for PoE, Ethernet, CCTV, and telecom systems. Understand key parameters like U_p , I_n , the 8/20 μs waveform, and installation best practices for data line protection. From an engineering perspective, signal SPD selection is not only about protection. From feed-in to the end device, we offer you the right surge protection for a multi-level protection concept. Depending on the installation location and requirements, surge protective devices are normatively divided into different types: type 1, type 2, and type 3. However, even with the right SPD type in place, users still find that real-world performance often fails to meet expectations. The four main types—1P, 1+NPE, 3P, and 3+NPE—each serve specific applications based on your electrical system configuration and protection.
