

# Solar power generation photovoltaic agent

## Overview

Photovoltaics is a method of generating electric power by using solar cells to convert energy from the sun into electricity. These cells are assembled into solar panels and then installed on the ground, rooftops or floating on dams or lakes. Photovoltaics (PV) is the conversion of light into electricity using semiconducting materials that exhibit the photovoltaic effect, a phenomenon studied in physics, photochemistry, and electrochemistry. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different. Solar energy is the conversion of sunlight into usable energy forms. Solar is the fastest growing energy source in the EU and is cheap, clean and flexible. According to the report, 2024 was another record year for solar PV, with between.
